

Enphase IQ Terminator (multi-phase) quick install guide

Use the multi-phase Enphase IQ Terminator (Q-TERM-3P-10) to seal unused multi-phase cable ends. It is sold in packs of ten.

For full installation instructions for the Enphase IQ Series Microinverters, read and follow all warnings and instructions in this guide and in the *Microinverter Installation and Operation Manual* at: <https://enphase.com/en-gb/installers/resources/documentation>. Safety warnings are listed to the right of this guide.

Terminating unused ends of multi-phase IQ Cable

A) Remove 20 mm of the cable sheath from the conductors.

B) Slide the hex nut onto the cable.

C) Insert the cable into the terminator body so that the four wires land on separate sides of the internal separator. The grommet inside the terminator body must remain in place.

D) Attach the cap:

- Bend the wires down into the recesses of the terminator body and trim as needed. Place the cap over the terminator body.
- Insert a screwdriver into the slot on the terminator cap to hold it in place.
- Rotate the hex nut with your hand or a wrench until the latching mechanism meets the base.
- Do not over torque.

E) Attach the terminated cable end to the PV racking with a cable clip or tie wrap so that the cable and terminator do not touch the roof.

WARNING: The terminator cannot be re-used. If you unscrew the nut, you must discard the terminator.
